Trans. of Aerotecnica (Italy) [1957] v. 37, p. 311-320.

By starting from the simplified equations and the hypotheses on which the Prandtl boundary layer theory is based, a study is made of the two problems essentially governed by these equations: (1) the boundary layer with injection of fluid; and (2) the interaction of the two streams. The equations are integrated by introducing polynomial developments for the profiles of velocity, concentration and enthalpy. The investigation, devoted to the general case, examines boundary layer thicknesses nonzero at the beginning of the interaction of the two streams, in the latter. The system of differ-
